

Microban® Filters

Feel the Difference

The water in your spa is only as clean as the filter you use. The latest Spa Industries Filter Cartridges are built with revolutionary new Filtration Media which combines 100% polyester synthetic fibers with Microban® antimicrobial technology which filters out contaminants and inhibit the growth of bacteria - making sure your water is always perfectly clear, clean & pure. Spa Industries uses Microban® antimicrobial product protection to protect the filter cartridge from being a nest for bacteria, mold and algae that can cause odours and product deterioration. Microban® antimicrobial protection is built into products during manufacturing to provide continuous antimicrobial product protection.

Microbes or micro-organisms are living cells that are too small to be seen with the naked eye. Microbes such as bacteria, mould and mildew can double every 20 minutes. In some cases, algae can damage product surfaces such as your spa pool filter. Microban® penetrates the cell wall of these micro-organisms making them unable to function, grow and re-produce. Microban® protection works continuously... for the lifetime of your Spa Industries Filter Cartridge.

Time Saving
Easy to Clean

Safe
Kills bacteria and micro-organisms on contact

Environmentally Friendly
Keeps your water cleaner, results in less water changes

Efficient
Safest most efficient way to filter your spa

Convenient
Long Lasting - Up to 2 years

Microban® Filters

Feel the Difference

1. What is Microban® antimicrobial product protection?

Microban® technology is built-in antimicrobial protection for solid products, coatings and fibers. Microban antimicrobial protection gives products an added level of protection against damaging microbes such as, bacteria, mold and mildew that can cause stains, odors and product deterioration.

2. How do products with Microban® antimicrobial protection work?

Microban® protection is built-in to the product during the manufacturing process. When microbes come in contact with the product surface, Microban protection penetrates the cell wall of the microorganism and disrupts cell functions disabling the microorganism's ability to function, grow and reproduce.

3. What benefit do my customers get from products with Microban® antimicrobial protection?

Microban protection continuously fights the growth of damaging microbes such as, bacteria, mold and mildew that can cause stains, odors and product degradation. Microban protection makes products easier to clean and keeps them cleaner and fresher between cleanings.

4. What types of microorganisms does Microban® protection work against?

Microban® antimicrobial protection is effective against most common bacteria, yeasts, molds and fungi that cause stains, odors and product degradation. Microban technology is not designed to protect users from disease causing microorganisms.

5. How do I know that Microban® antimicrobial product protection is safe?

Microban® technology has undergone extensive independent laboratory testing and has a long history of safe use. It is registered with the EPA for all applications in which it is used. Microban additives can be found in the products of leading consumer, industrial and medical products manufacturers around the world.

6. Does Microban® protection begin working immediately?

Microban® protection begins to work as soon as the microorganism comes into contact with the product surface. It then works continuously to maintain a consistently lower bio-burden than would be expected on a product without Microban® antimicrobial protection. Under the right conditions, microbes on an untreated surface can double every 20 minutes! Microban protection is not a disinfectant, normal cleaning practices should be maintained.

7. How long does Microban® antimicrobial protection work?

Microban® protection is built-in during the manufacturing process and will not wash off or wear away. Microban protection is engineered to provide continuous antimicrobial product protection for the useful lifetime of the product.

8. Where do I purchase my Microban Filters?
